

Construction is one of the most dangerous industries - let us help keep your team **safe**

First Aid Training

Course designed for construction sites

It's the Law

OSHA requires that an employer must ensure prompt first aid treatment for injured employees. This can be done either by providing a trained first aid provider at the worksite, or by ensuring that emergency treatment services are within reasonable proximity of the worksite. Since not all worksites can be within reasonable proximity to emergency care, First Aid Training is essential.

Contact us to learn more on how we can provide private training at your facility.

Let us make your team a safer one today
